Course overview

The importance of Mobile device programming has emerged over the recent years as a new domain in software development. This program prepares the students to develop applications that run on mobile devices such as an iPhone, iPad or Android phone. This is a rapidly developing market. Course focuses on installing, developing, testing, and distributing mobile applications. At the end of this course students are able to develop an app for the platforms covered, simulate them, test them on the real device and finally publish on the app store to make availability to the users.
